How your business can combat e-crime

1. Install anti-virus, a firewall and anti-spyware software on IT systems
2. Use a password at least 8 characters long and utilise a combination of different cases, numbers and characters
3. Be cautious when opening all emails and attachments
4. Introduce an Acceptable Use policy for internet and email
5. Keep up-to-date with patches and software updates
6. Secure your wireless network
7. Ensure your clients are aware that your company would never request their personal or sensitive data
8. Educate staff so that they are aware of the threat
9. Encrypt your data and control who has access to it
10. Employ a backup device to guard against data loss
